

The Ultimate Cellular Parts Washer... the RTO-2000

CASE STUDY 20198

MANUFACTURING

Background

This company is the main supplier for hydraulic cylinders that tilt the forks on a forklift truck.

Problem

They needed small parts washers that would work in very compact work cells.

Solution/System

The RTO-2000...load one(1) part, hit "cycle start", and walk away. The part moves into the spray chamber, the door is powers down, and the cylinder is sprayed with the hot, recirculated solution. In just two(2) minutes the part is clean and ready for pick-up.
