

Background

This global company was originally founded to produce aluminum. Today, they are not only a leader in aluminum production but offer a wide range of aluminum products including automotive structural components .

Problem

The customer needed to wash and dry a complex aluminum weldment prior to shipment. They needed to remove weld smut and light oils. The customer also wanted a system that could be loaded and unloaded by the same operator.

Solution/System

A C-18-S2/ DA belt washer with a special return conveyor and elevated load height. This conveyor washer is all stainless steel and has wash and dry modules.
